

The background of the entire slide is a monochromatic blue-tinted historical photograph of the RMS Titanic. The ship is shown from a high angle, listing heavily to its starboard side as it sinks into the ocean. Numerous lifeboats are visible along the ship's deck, many of which are filled with people. In the foreground, several lifeboats are floating independently in the choppy water, with people inside. The overall scene conveys the scale and tragedy of the disaster.

Latar Belakang

Peristiwa Titanic (15 April 1912) merupakan salah satu kecelakaan terbesar dalam sejarah di mana **dari 2224 penumpang hanya 707 yang selamat** (Frey, et al. 2010). Kapal Titanic menabrak bongkahan es saat melakukan perjalanan dari Southampton ke New York. Kapal Titanic karam dalam waktu 2 jam 40 menit sejak peristiwa tersebut. Waktu tersebut dinilai cukup untuk memunculkan karakteristik sikap manusia sebagai makhluk sosial dalam menghadapi situasi darurat (Frey, et al. 2010).

TUJUAN

- MELIHAT HUBUNGAN ANTAR ATRIBUT YANG DAPAT MENJELASKAN TINDAKAN APA YANG DILAKUKAN PENUMPANG TITANIC UNTUK BERTAHAN HIDUP
- MELIHAT SEBERAPA AKURAT ATRIBUT-ATRIBUT PADA DATA MEMPREDIKSI KEMUNGKINAN MANUSIA UNTUK BERTAHAN HIDUP

DATA

- 1309 BARIS
15 KOLOM

METODE

UNDERSTANDING

Studi literatur dan
Exploratory Data
Analysis

PREPARATION

Pemberishan data dari
noisy data, missing
values, incorrect data
types, outliers, dan
imbalanced dataset dan
pengurangan atribut
yang tidak relevan

PREDICTION

Pembentukan model
dengan beberapa
algoritma klasifikasi
seperti SVC, Random
Forest, Decision Tree,
dan Logistic Regression

EVALUATION

Mengevaluasi model dari
nilai accuracy, precision,
dan recall. Selanjutnya
melakukan parameter
tuning pada model.

Mr	: from	757	survive	123	Rate : 0.1625

Attribute-Survive^A Correlation

Honor/ Titile Attribute

Data Preparation

- Drop atribut ticket, cabin, body,
- Atribut name diisi dengan title dari penumpang seperti Mr. Mrs. Master. dan lain-lain selanjutnya digunakan Label Encoder
- Atribut sex diubah menjadi numerik (Female = 1, Male = 0)
- Atribut age diubah menjadi categorical seperti children, youth, adult, dan senior.
- Missing value pada atribut fare diisi berdasarkan nilai kuartil dan dikategorisasi menjadi cheap, normal, high, expensive.
- Menambahkan atribut Mother, Children, Alone, Priority, dan Respectable

HASIL

No	<u>Algoritma Pembelajaran Mesin</u>	A (%)	Std (%)	<u>A.os (%)</u>	<u>Std.os (%)</u>
1	<i>Logistic Regression</i>	81.24	2.95	79.68	2.54
2	<i>Support Vector Machine</i>	81.74	3.03	80.16	2.59
3	<i>Decision Tree</i>	78.86	3.12	78.38	3.11
4	<i>Random Forest</i>	79.20	3.12	79.55	3.16

- Algoritma Support Vector Machine (SVM) memberikan nilai akurasi paling baik.
- Lam et al. 2012, nilai akurasi dari SVM lebih tinggi 2.17% sedangkan hasil dari Decision Tree lebih rendah 1.05%. Namun hal tersebut masih berada pada rentang standar deviasi dari pemodelan.
- Kakde et al. 2018, rata-rata akurasi dari keempat algoritma pembelajaran yang sama sebesar 82.325%, lebih tinggi dari penelitian ini sebesar 79.44%.
- Singh et al. 2017 yang menunjukkan performa rata-rata model lebih dari 90%.

No	<u>Algoritma Pembelajaran Mesin</u>	A (%)	Std (%)	<u>A.os (%)</u>	<u>Std.os (%)</u>
1	<i>Logistic Regression</i>	81.24	2.95	79.68	2.54
2	<i>Support Vector Machine</i>	81.74	3.03	80.16	2.59
3	<i>Decision Tree</i>	78.86	3.12	78.38	3.11
4	<i>Random Forest</i>	79.20	3.12	79.55	3.16

- Perbedaan pada proses features engineering. Perubahan data nominal kedalam data numerik berdasarkan pengelompokan yang mengacu pada aturan tertentu. Contoh: pengelompokan title penumpang berdasarkan nilai survival rate serta pengelompokan usia penumpang yang mengacu kepada definisi Statistics Canada.
- Hasil pemodelan menunjukkan peningkatan nilai untuk data yang tidak diproses over sampling. Proses ini juga tidak ditemukan pada paper Kakde et al. 2018.

No	Parameter	Nilai	<u>Nilai.os</u>
1	C	10	50
2	Gamma	0.01	0.01
3	Kernel	<u>rbf</u>	<u>rbf</u>
4	<u>Akurasi (%)</u>	81.49	80.29
5	<u>Standar deviasi (%)</u>	2.64	2.38

No	<u>Evaluasi</u>	Nilai (%)	<u>Nilai oh (%)</u>
1	<u>Akurasi</u>	80.15	79.39
2	<u>Presisi</u>	73.91	73.33
3	Recall	70.83	68.75
4	F1	72.34	70.97
5	Mean absolute error	19.85	20.61
6	Root mean square error	44.55	45.39

- Nilai f1 yang dihasilkan dibawah nilai akurasi dari model
- Perbedaan nilai presisi dan recall sebesar 4.58%. Model yang baik memiliki nilai presisi semaksimal mungkin dan recall semimum mungkin.
- Perbedaan antara perhitungan model tanpa over sampling menunjukan ketiga nilai yang mengalami peningkatan.
- Besarnya nilai f1, presisi dan recall ini bisa didapatkan dengan meninjau tabel confusion matrix.
- Model dapat memprediksi kemungkinan penumpang selamat atau tidak dengan titik kesalahan 20.61%.
- Kualitas dari model memprediksi kemungkinan penumpang bertahan hidup atau tidak sebesar 45.39%.

	TP	TN		<u>TP_{os}</u>	<u>TN_{os}</u>
FP	71	12	<u>FP_{os}</u>	71	12
FN	14	34	<u>FN_{os}</u>	15	33
